DETAILED ACTION

Claim Rejections - 35 USC § 102

1) The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2) Claims 1, 3-8 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by Krueger et al (6182301).

In re claim 1, Krueger et al provides a rotary damper comprising: first and second chambers (58) which are separated by a partition wall (73, 87); a rotor (near element 19 in figure 5) which is rotatably arranged within the first chamber; a viscous material which is filled in a slight gap between the rotor and a slidable contact surface slidably contacted by the rotor; a viscous fluid filling the second chamber; and a vane (56) which is swingably arranged within the second chamber filled with the viscous fluid.

In re claim 3, see element 75.

In re claims 4-5, 7-8, see element 16 and element near element 19.

In re claim 6, see figure 20.

IN re claim 13, the damper of Krueger is capable of being used on a console box.

Application/Control Number: 10/516,854 Page 3

Art Unit: 3683

Claim Rejections - 35 USC § 103

3) The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4) Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Krueger et al (6182301) in view of Kato et al (6264264).

Krueger et al lacks the teaching of the valve.

Kato et al provides a valve (120) acting as claimed.

It would have been obvious to one of ordinary skill in the art at the time of the invention to have provided the vane of Krueger et al with a vane as taught by Kato et al merely to provide a good control of the fluid in the damper and to vary the resistance.

Allowable Subject Matter

5) Claims 9-12 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

6) The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Takahashi, Li, Arakawa, Ohshima, Miyahara et al, Hsiao and Kobori et al all provide rotary dampers similar to the instant application.

Application/Control Number: 10/516,854
